

SECTION 3

1. What is a computer network? Explain its purpose in simple words.

A **computer network** is a group of two or more computers and devices that are connected together to **share information, resources, and services** like files, internet, or printers.

Purpose in simple words:

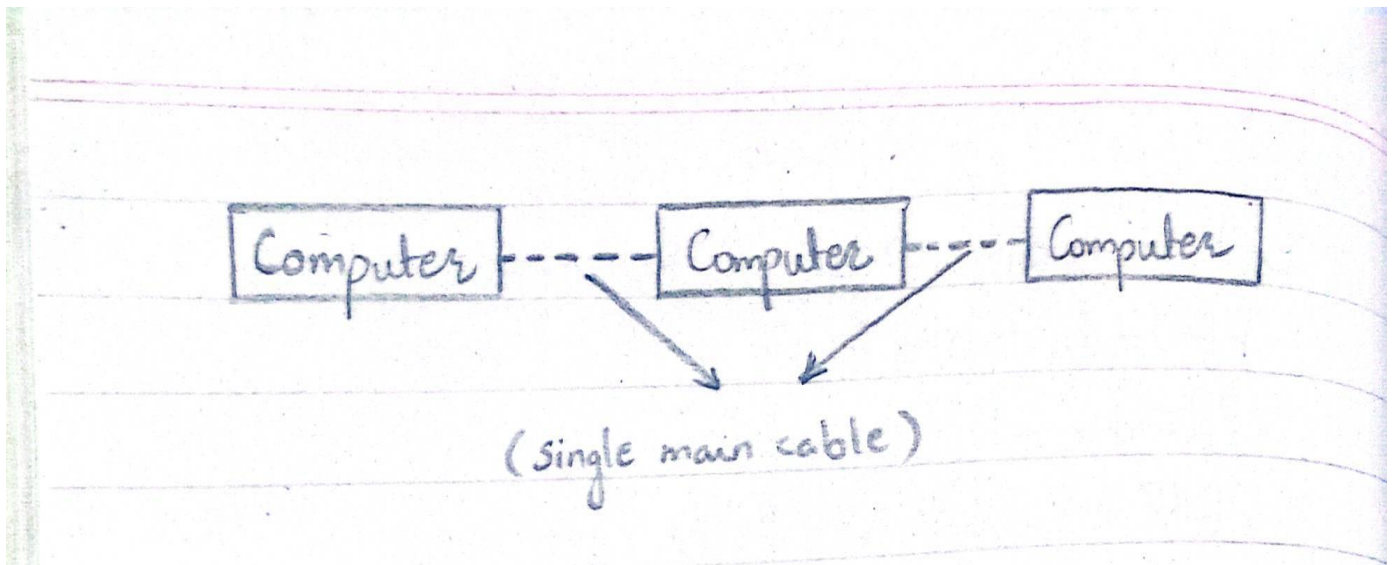

- To **share resources** like printers, files, and internet.
- To **communicate easily** with others using messages or emails.
- To **save money and time** by using shared resources instead of buying individually.

2. Write any three types of networks (based on size or coverage area) and explain each in one or two lines. (Example: LAN, MAN, WAN)

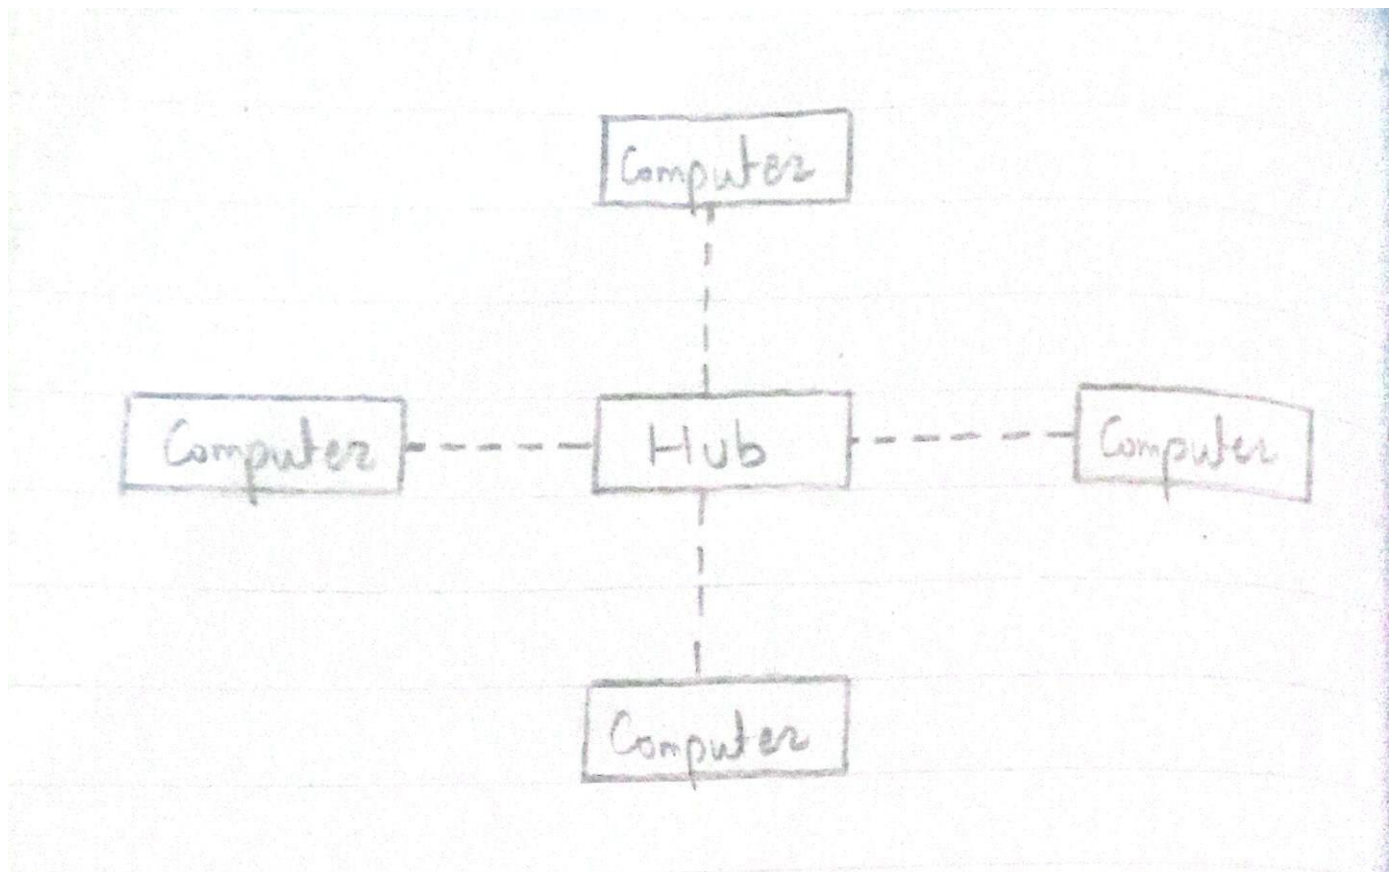

1. **LAN (Local Area Network)**
 - Covers a **small area** like a home, office, or school.
 - Example: Computers in your classroom connected to the same router.
2. **MAN (Metropolitan Area Network)**
 - Covers a **city or town**.
 - Example: A network connecting all branches of a bank in a city.
3. **WAN (Wide Area Network)**
 - Covers a **large area**, even countries or the world.
 - Example: The internet is the largest WAN connecting millions of computers.

3. Draw and label any five network topologies. (Examples to draw: Bus, Star, Ring, Mesh, Hybrid)

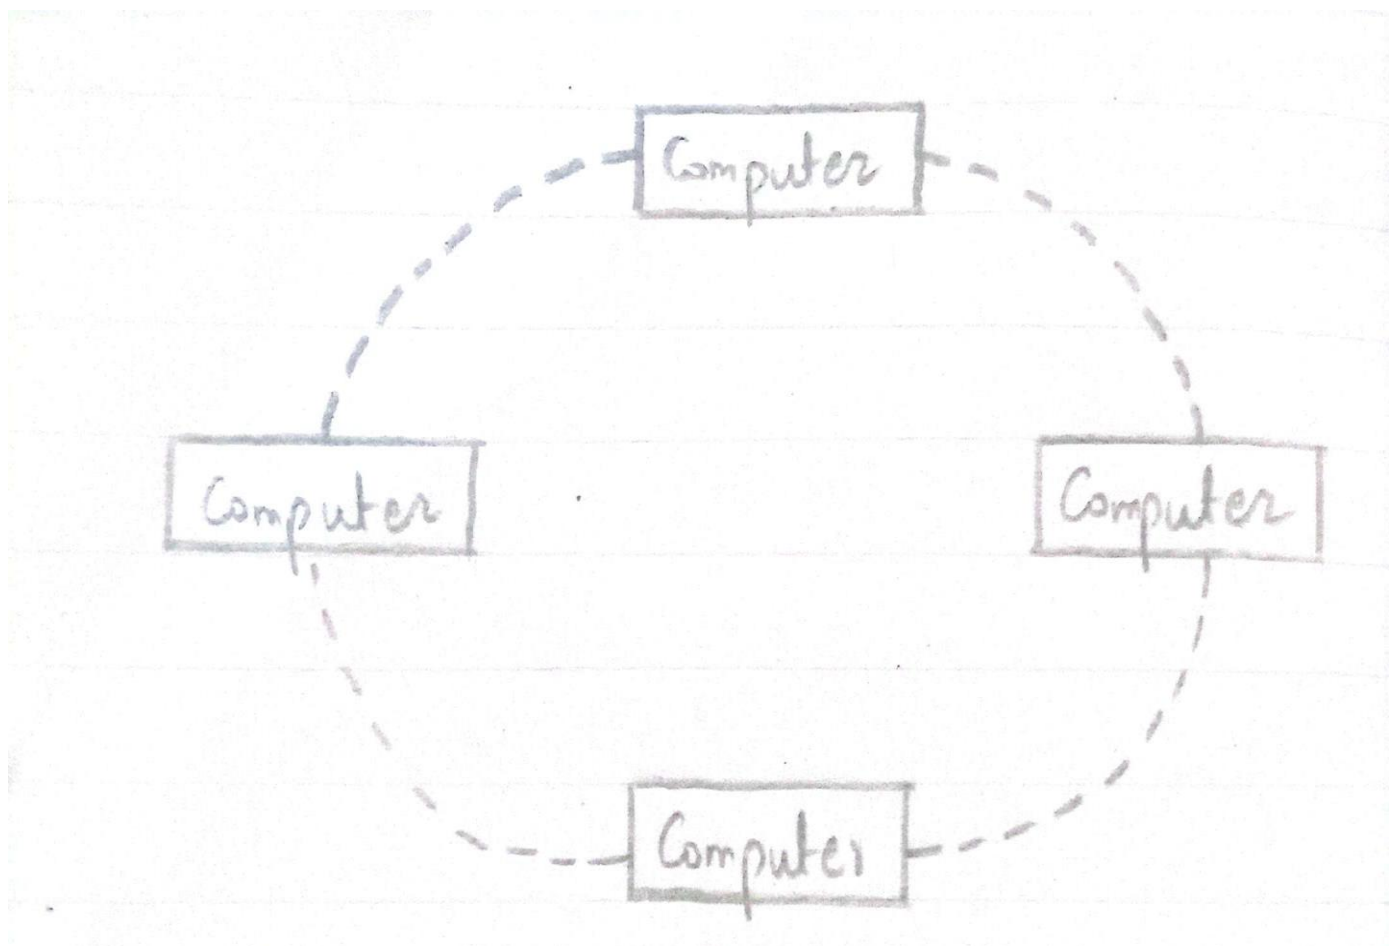

a) Bus Topology

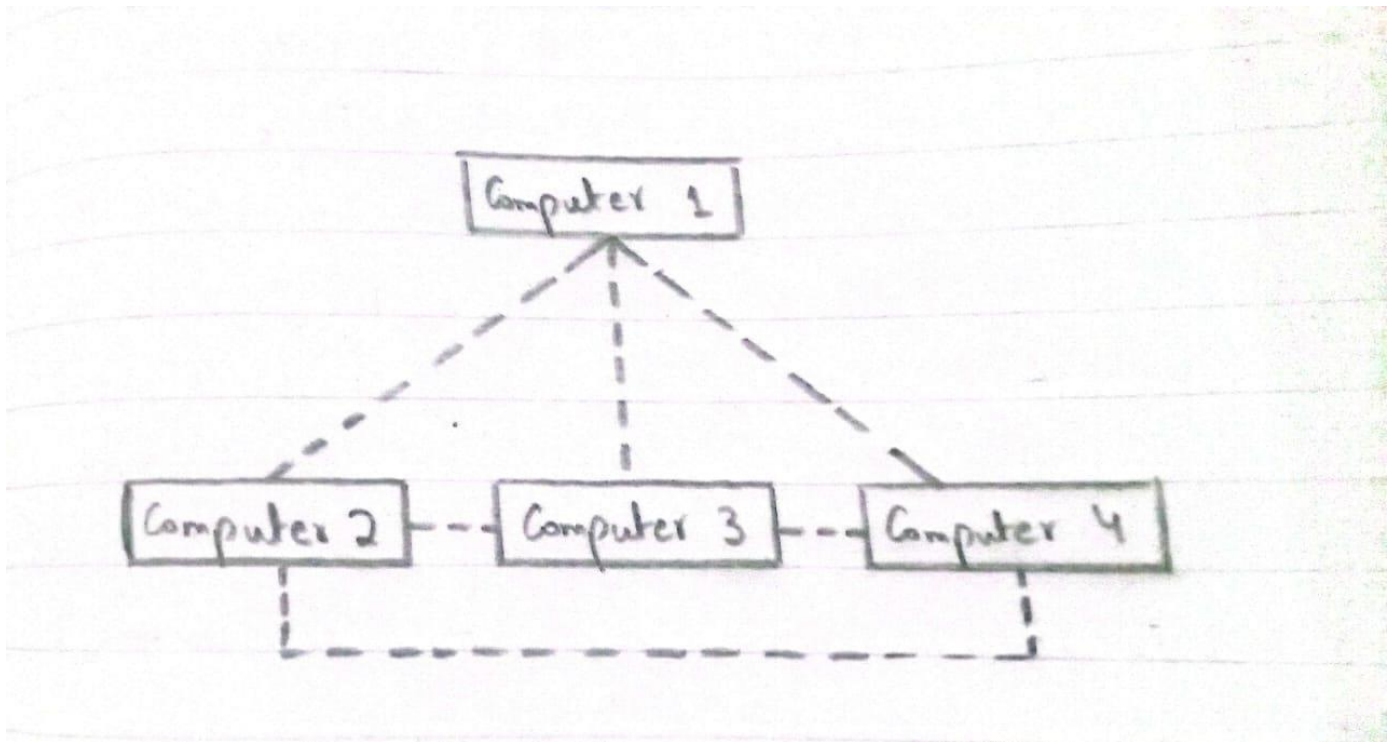

b) Star Topology

c) Ring Topology

d) Mesh Topology

e) Hybrid Topology
