

Linear Equation:-

A linear equation is an algebraic equation in which the highest power of the variable is one. It represents a straight line when graphed. The standard form of a linear equation in one variable is:

$$ax + b = 0$$

where 'a' and 'b' are constants and 'x' is the variable. In two variables, the standard form is:

$$ax + by + c = 0$$

where 'a', 'b', and 'c' are constants, and 'x' and 'y' are the variables.

Examples:

$$y = 8x - 9$$

$$y + 3x - 1 = 0$$

$$6x + 2y + 9 = 0$$
